**Spectra-Glaze.**  
The facing block with a difference: allows construction and decorative finish in a single operation. It has a permanently bonded satin glazed face which comes in 64 harmonised fade-free colours. It's tough, acid resistant and weather-proof. In internal situations Spectraglaze has been widely used in place of conventional tiling to give a durable and hygienic finish. But increasingly architects are using the enormous design potential of Spectraglaze to exciting effect on external cladding.
